(a) conditioning does not limit power
(b) validity holds in 38 of 41
(c) what limits power is the number of true signals
blend to identity
AR(1)
real feature constructions
collapsed covariance:
14 points, not everything
minimum 0.770
per-signal power
effective rank of Σ
realised FDP
q = 0.20
target conditional |t|
0.97
0.26
0.21
12 signals
3 signals
3 near-collinear
